

Trident™

Add-A-Phase Power Restoration Auto-Transformer

Trident was specifically designed for utility linemen, featuring modular, ultra-portable 10kVA units that enable effortless one-person carry-in and deployment. It leverages advanced toroidal autotransformers to swiftly restore a missing hot leg or neutral in 120/240V or 120/208V services, minimizing downtime and keeping homes powered during outages from storms, accidents, or maintenance - setting it apart from our wheeled PowerBack models for quick access to hard-to-reach sites.

Key Features

- **Modular & Portable:** Lightweight 20kVA unit (45 lbs each) with handles
- **Versatile:** Restores lost phases/neutrals for up to 200A residential service.
- **Safe:** Non-metallic, flame-rated enclosures – no grounding needed
- **Flexible:** Individual circuit breakers for selective power distribution

Benefits

- One-person installation in under 30 minutes
- Reduces outage downtime during storms, accidents, or maintenance
- Built for rugged environments - safe for outdoor use in wet conditions
- Proudly USA-made with high-quality components
- 3-year warranty for peace of mind

Perfect for Utility Crews, Electricians, and Disaster Response Teams
